THE MINISTER OF STATE IN THE MINISTRY OF WATER RESOURCES (SHRIMATI BIJOYA CHAKRAVARTY): (a) and (b) The post-earthquake Indian Remote Sensing Satellite (IRS) 1D imagery show a number of possible stream channels in Rann of Kutch, which are not visible in pre-earthquake imagery of the same area. The schemes of water resources development and use are formulated and implemented by the State Government since water is a State subject.

Erosion problems in coastal Orissa

1827. SHRI ANANTA SETHI: Will the Minister of WATER RESOURCES be pleased to state:

(a) whether Government are aware of the increasing acute water logging and soil erosion problems of coastal States particularly Orissa; and

(b) if so, the details of the steps taken by Government to tackle the problem?

THE MINISTER OF STATE IN THE MINISTRY OF WATER RESOURCES (SHRIMATI BIJOYA CHAKRAVARTY): (a) and (b) The States of Andhra Pradesh, Kerala and Orissa have reported soil-erosion due to river bank erosion. Water logging problems has been reported from Orissa and Gujarat States only. In Orissa, the districts affected severely by water logging problems are Cuttack, Jagatsinghpur, Kendrapara, Puri, Khurdra, Jaipur, Bhadrik, Ganjam and Balasore. An area of 1.96 lakh ha. are liable to water logging out of 64.20 lakh ha. arable land in Orissa.

Flood Management being a State subject, flood control projects are planned, funded and executed by the State Government themselves out of their own resources and as per their own priorities.

At places where water logging has already taken place, remedial measures are being taken for which a new component "Reclamation of water logged areas in irrigated commands" has been included under the Command Area Development Programme since 1.4.1996. Under this component, 50% Central assistance is admissible to States on matching basis. At present the norm of Central assistance is @ Rs. 6000/- per ha. or 50% of the total cost of the reclamation whichever is less.

State Government of Orissa has prepared plan titled, " Delta Development Plan" with an estimated cost of Rs. 198.99 crore for drainage development of Mahanadi Delta area which includes construction of drains, tidal flood regulation facilities and embanking of drains. State Government is taking up schemes out of this Master Plan according to their priority. The State Government has taken up a project during 1997-98 for Doab No. 1 (Mahanadi Kathajoin Doab) amounting to Rs. 9.25 crore to save 31890 ha. area from water logging.

Land covered by any catchment areas

†1828. SHRI KAPIL SIBAL: Will the Minister of WATER RESOURCES be pleased to state:

(a) whether it is a fact that there is a certain part of land in the country which does not fall under any catchment area;

(b) if so, total area of such land and the percentage of this land out of the total land;

(c) whether Government have made assessment of the requirement of water for such land; and

(d) if so, the extent of water required for such land?

THE MINISTER OF STATE IN THE MINISTRY OF WATER RESOURCES (SHRIMATI BIJOYA CHAKRAVARTY): (a) to (d) The geographical area of the country has been divided into 20 river basins. Area North of Ladakh, not draining into Indus, and areas of Andaman, Nicobar and Lakshadweep Islands do not fall in any of these basins. These areas constitute 36,758 square kilometer which is 1.12% of the total geographical area of the country. Requirement of water is closely related to population, demand for food, production of industrial items, production of energy and preserving ecology. The area of North Ladakh remains snow-bound round the year and is largely uninhabited having negligible water requirement. The requirement of water for Andaman, Nicobar and Lakshadweep Islands is of the order of 950 million cubic meter which is met by harnessing the abundant rainfall in these areas.
